Introduction

Since the Atlas of the Danubian Countries is an international thematic atlas offering comprehensive coverage of an extensive geographical region, the index is more elaborate than is usually the case:
It also comprises official variant names, former official names and exonyms not contained in the Atlas. Whereas the Atlas gives only the transliterated forms of names from languages using non-Latin scripts, the index provides the forms in the original script as well. Map sheet references refer not only to the topographical map but also to all thematic maps. The language of each name is identified.

In providing such additional information the index goes beyond its basic function, serving as a sort of multilingual, comparative and retrospective gazetteer.

I. Scope of the Index

The index lists the names of geographical features shown on all maps as well as on all insets, profiles and diagrams appearing on the map and text sheets of the Atlas. Not included are geographical names mentioned in coherent legend texts, in the text sheets themselves and in the two general reference maps on the Topographical Map (111). Name variants used in the maps covering transport (351–353) which differ from the official place names only in respect of added elements have been recorded only as cross references to the official name.
The names appearing on the main maps at 1 : 2,000,000 of the Atlas form the bulk of the index (see General Reference Map on page XXV). However, the index also includes names given in component maps and insets going beyond the scope of the main map.

II. Arrangement of the Index

1. Index Entries

Index entries are a) main headwords with accompanying articles (see III) and b) cross references.
The names contained in the Atlas, furthermore the original forms in non-Latin script (though not given in the map volume of the Atlas), are in **boldface**. Exception: When the name of a river appears in several languages on the map, only the name nearest to the mouth of the river is printed in boldface. Similarly, if, in the course of the publication of the Atlas instalments, an official name was changed, it is not the changed name that is printed in boldface but the name appearing on the map whose number is given in boldface in the index.

a) Main Headwords

The main headwords are the current official names. Therefore non-official abbreviations used in the maps are expanded in the main headword and names rendered obsolete by renaming subsequent to printing appear only as cross references. Where official names exist in two different languages, the name used on the map in the Atlas has been chosen as the main headword.
Where names of regions, mountain ranges and lakes appear in various languages on the map, the name with the widest territorial application has been chosen as the main headword. For the selection of the names of seas and sections of seas coast length on the map has been the decisive criterion. For rivers flowing through different language areas, the name appearing nearest to the mouth upstream on the map has been used as the main headword.

b) Cross References

Cross references are all allonyms and names of settlements with formerly separate administration (absorption into larger units, merger) that follow the main headword.
Furthermore there are the following cross references not given after the main headword:

1. names with minor differences in spelling, such as Odorheiul Secuiesc versus Odorheiu Secuiesc,
2. names consisting of two or more words with only the word order differing, such as Mali Drvenik versus Drvenik Mali,
3. names preceded by an abbreviated generic term which serves merely as a topographical classification, such as n(os) Emine versus Emine,
4. non-official abbreviations used in the map, such as St. Pölten versus Sankt Pölten,
5. transposed headwords (broken lemmata) in names other than those of populated places, such as Făgăraşului, Munţii versus Munţii Făgăraşului.

Cross references of a special form are the names of mountain ranges not appearing under their 'umbrella' name on the map. Here the respective allonyms are added to the cross reference and users are referred to the names of the several parts of such mountain ranges as appear on the map.
Examples: Alpen, Karpaty, Stara planina.

2. Alphabetical Order of Headwords

No notice is taken in this context of hyphens, oblique strokes, full stops (e.g. in abbreviations) and inverted commas (e.g. in names of pipelines), spaces between words, capitalization and lower-case spelling, letters given in parentheses, letters following a comma (in transposed headwords), Arabic or Roman numerals forming part of a proper name (e.g. Băile 1 Mai, Manica I) as well as non-Latin-script name forms following an oblique stroke.
The main index (headwords in Latin script) is supplemented by cross reference indexes for the Cyrillic script and Greek script where all non-Latin-script name forms are listed.

a) Main Index

In the main index the headword names from languages using the Latin script are listed together with any latinized names in alphabetical order, i.e. in the sequence a b c d e f g h i j k l m n o p q r s t u v w x y z, irrespective of possibly divergent national alphabetization rules. Entries are alphabetized regardless of diacritical marks (such as dot, acute, cedilla, tilde). German ß is alphabetized as ss.

b) Cyrillic-script Cross Reference Index

The names from the languages using the Cyrillic script (Bulgarian, Macedonian, Moldavian, Russian, Serbo-Croat, Ukrainian, Byelorussian) are additionally listed in a separate cross reference index. Alphabetization is in accordance with the table on page XXIII, though Russian e is alphabetized as e and Ukrainian and Macedonian ' disregarded for the purposes of alphabetization.

c) Greek-script Cross Reference Index

The Greek-script names (Modern Greek) are additionally listed in a separate cross reference index. Alphabetization is in accordance with the table on page XXIV, taking no notice of accents, *spiritus asper*, *spiritus lenis* and *iota subscriptum*.

III. Organization of Entries

Each entry gives the following particulars in the sequence shown below:

1. Main headword
2. Non-Latin-script form (for names from languages using Greek or Cyrillic script)
3. Language classification of the main headword
4. Current official allonyms, including language classification and original spellings in non-Latin script
5. Identification of features (only for names appearing on map sheets 111/Topographical Map and 251/Administrative Districts)
6. Other allonyms, including language classification and original spellings in non-Latin script (only for names appearing on map sheet 111/Topographical Map)
7. Country location
8. Grid square reference
9. Map sheet reference

Notes on the individual items in the entries:

1. Main headword

The main headword is always given in its original Latin-script form or in a transliterated latinized spelling.

2. Non-Latin-script form

The latinized name (main headword) is followed by an oblique stroke and the spelling in the original script.

3. Language classification

Language classification is to be understood in a lexical sense, i.e. a name is classified as belonging to the vocabulary of the language indicated, regardless of possible structural or etymological peculiarities and deviations. Examples: Šternberk, Czech, although structurally German with only formal assimilation to Czech; Cernavodă, Rumanian, although of Slav origin.

Note: Friulian according to orthography of G. A. Pirona (1977).

4. Current official allonyms

1) Names in a second official language: Russian in the Union Republics of the Ukraine and Moldavia, Albanian in the Autonomous Province of Kosovo, German in the Autonomous Province of South Tyrol
2) Greek names in the standard colloquial language (Dēmotikē) making use of the "one-accent system"
3) Albanian names in their indefinite form
4) Other official names of features extending across national or language boundaries, e.g. *ung.** Ferto following the main headword Neusiedler See, *dt.* March following the main headword Morava

For language classification see Item 3.

5. Identification of features

Features are identified only in names appearing on maps 111 (Topographical Map) and 251 (Administrative Districts). In respect of names appearing on thematic maps the map sheet number provides a clue as to the thematic classification of the feature, e.g. 142–144 (Climate): weather stations, 331 (Mineral Deposits): deposits, 151 (Hydrogeography): gauges, thermal and mineral springs. For the topics corresponding to the respective map sheet numbers see List of Annotations on page XXI.

6. Other allonyms

In order to enhance the usefulness of the Atlas with its strict adherence to national official spellings, selected allonyms beyond those given in Item 4 have been taken up into the index:

1) Names rendered obsolete since the beginning of the 20th century on account of
   a. renaming in the same language, e.g. Zlin, renamed Gottwaldov,
   b. change of the official language within a nation's territory, e.g. *sbkr.** Bitolj replaced by *mak.* Bitola,
   c. change of national sovereignty, e.g. *ung.* Szabadka replaced by *sbkr.* Subotica.

2) Exonyms of the four languages (German, English, French, Russian) in which the Atlas is published, e.g. *dt.* Bukarest for *rum.* București, *engl.* Eastern Carpathians for *rum.* Carpații Orientali, *frz.* Cracovie for *pol.* Kraków, *russ.* Vena for *dt.* Wien, as well as current exonyms of other languages used in the area represented, e.g. *tsch.* Pasov for *dt.* Passau, *slwn.* Videm for *it.* Udine, *slwk.* Ostrihom for *ung.* Esztergom, *alb.* Shkupi for *mak.* Skopje.

For language classification see Item 3.

7. Country location

Country location is given by means of abbreviations based on the respective national form of name, e.g. MGY for Magyarország (see List of Annotations, page XIX). With features crossing national boundaries the country location given refers only to the section shown on the main map; thus, e.g. for the Elbe the country location given is only DDR/CS and not BRD as well. With rivers flowing through several countries the abbreviated names of the respective countries are listed in a sequence upstream from the mouth.

8. Grid square reference

To locate a name on the map the degree square is indicated. The degree square always refers to the names and the map sheet number in boldface. On further maps the name of the same feature may also appear in an adjacent degree square. Where features are shown by means of dot symbols, the location of the symbol is decisive; where seas, mountain ranges and regions are shown it is the extension of the lettering on the map that is

* Abbreviations of language classification see List of Annotations.

operative. With rivers the degree square given refers to the location of the first name appearing on the map upstream from the mouth.

9 Map sheet references

The map sheet references at the end of an entry indicate the maps on which the name appears. The number of the map giving the best presentation is printed in **boldface.**

For the topics corresponding to the respective map sheet numbers and the meaning of the abbreviations next to the map sheet numbers see the List of Annotations (p. XXI).
